NSF / Moonshots Tiers Test - PRD

As of Jul 31, 2025 , Kaison Tanabe
Status: In progress
Summary:
This document outlines a test designed to evaluate revenue impact and product differentiation opportunities by introducing a premium tier for the NSF certificate offering.
Relevant Docs:
Figma | Slack Community Feature

Hypothesis	If we offer a premium tier at NSF pre-enrollment ads push (9/4) featuring high-value career advancement tools (roleplays, coaching), we'll: ● Drive greater revenue earlier in Q3 2025 ● Strengthen product differentiation in a crowded space
Proposal	From 9/4-9/11 ● 100% of users will see two tiers (based + premium) From 9/11-10/2: ⇒Pre-Paywall (Landing Page) ● Run an A/B where 50% of users see no tier, 50% of users see two tiers (structure here) ⇒For Premium Tier purchasers: ● Provision users OnCall immediately (3 year provision) ● Provide 3 year access to certs content ● Credit to apply to future certs (requires contacting support) ⇒For Base Tier purchasers: ● Stretch goal: Upsell Premium tier in checkout flow after purchase ● Later Optimizations: In-product, show locked Premium features with upsell CTAs
Supporting Evidence	On Call + Core Premium Tier Test learnings: ● Premium uptake increased from 5% → 10% ● But CVR dropped, leading to lower net D0 sales Certs hypothesis: ● Cert buyers are more lean-in than Core buyers ● Career-driven utility of Premium should resonate more with OnCall features → higher CVR retention
Caveats / Risks to this approach	● Increases chances of initial launch going wrong because we're no longer 100% focused on pre-sales work and now we're looking to rush this. We are creating /increasing the chance of something going wrong, mistakes, risks to core launch.

	• What if we're not ready 10/2 to deliver premium features? ⇒ we thought it necessary to caveat if we were going to integrate on call features into certs experience, but now that we've decided to provision on call, we're not feeling this is a need • Premium tier has higher value on the 1st purchase and there's less incentive for users to purchase premium tier more than once. • Increases test complexity of future pricing test • Not certain that role play / coaching features are the top opportunities to create a successful premium tier ⇒ we'll address this after reviewing conjoint study Aug 15, 2025 • Might require deprioritization of some q3 certs work like shareable video pre-enrollment, shareable video after cert completion, navigation / merchandizing experiments • Requires dependency on interview role prep which starts Aug 4, 2025 ~~• Decoupled build → On Call improvements won't auto-propagate~~ ~~• UI/UX may feel bolted-on vs native integration~~ ~~• Potential for pricing cannibalization if On Call appears cheaper than Cert + Premium~~ ~~• Might reduce margins as we will distribute on high end 15-20% of incremental increase to instructors who are in 'coaches'~~
Impact Estimate / Size of Opportunity	+10-30% sales/visitor gains for NSF
Primary Metric	Sales/Visitor
Surface Area	Navy Seals Certificate Landing Page + Moonshots Certificate Landing Page

Run Time/Traffic Estimate (with confidence)	**Update Sample Size 9/15:**
	Adjust pre-test requirements based on 9/4-9/10 data to:
	• Update baseline assumption based on pre-experiment days 9/4-9/10
	  ○ CVR (from the few days of experiment-free days) [source]: 0.781%
	  ○ AOV = $303
	  ○ Sales/Visitor = $2.4, standard deviation: 28.9
	• Keep the 10% MDE for statistical purposes
	• Sample size per variant: 135K [source]
	  ○ Based on current 42K weekly traffic (observed during the 3-day test), test run time ~45 days
	
	Previous Sample Size (outdated):
	For 2-cell: 2-4 weeks (ballpark)
	• 30% MDE, 12k samples needed total
	• 10% MDE, 106k samples needed total
	For 3-cell: 4-7 weeks (ballpark)
	• 30% MDE, 18k samples needed total
	• 10% MDE, 160k samples needed total
	
	Based on 10k visitors a week, 90% Confidence, 80% Power
	Growth Sample Size Calculator by Entry Point Certs tab

Estimated cost for traffic	Avg Traffic for Experiment Cost	Navy Seals Estimate (Leadership)	Google Moonshot (Innovation)
Target Impressions	100,000	100,000	100,000
Potential Clicks to Traffic drop off	15%	15%	15%
Clicks	117,647	117,647	117,647
CPM	$23.53	$34.43	$27.61
CTR	0.69%	0.78%	0.51%
Impressions needed	17,050,298	15,082,956	23,068,051
CPC	$0.02	$0.03	$0.03
Estimated total cost	$401,194	$519,306	$636,909

It would take roughly **$400k to reach 100k clicks on the ad on average for Certificates.** (accounted for some traffic dropoff as well). PALM to sanity check here.

	Certs Paid Media Budget Split				
	Sep-25	Oct-25	Nov-25	Dec-25	Total
	$130,740	$296,345	$435,801	$383,505	$1,246,391
old	10%	24%	35%	31%	100%
	Sep-25	Oct-25	Nov-25	Dec-25	Total
	$211,886	$286,670	$436,237	$311,598	$1,246,391
new	17%	23%	35%	25%	100%

As our budget does not account for this amount of ad spend, we suggest collapsing the test to as few cells as possible.

What would have to be true to get directional signal in 1 week?

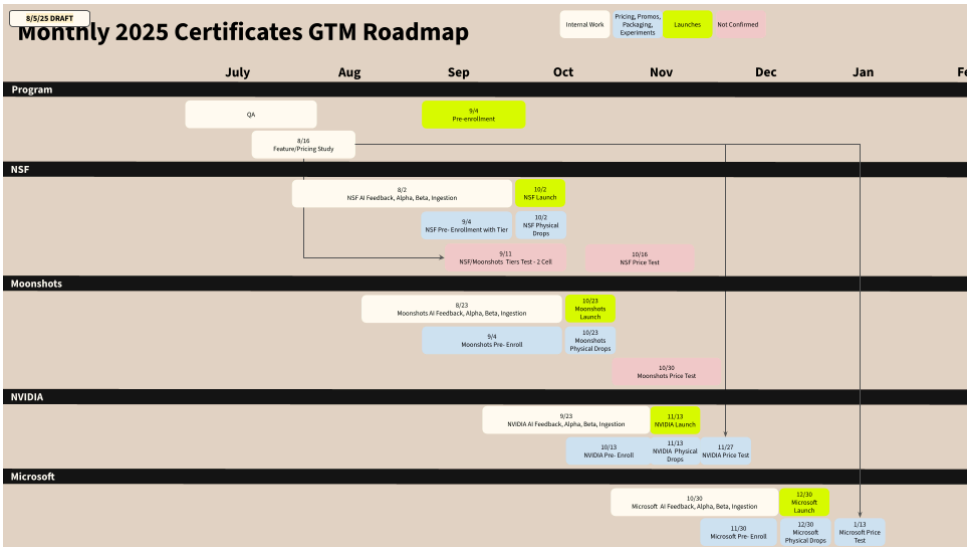
To ensure confidence in our decision, we should make sure we have enough data volume and statistical power. We would most likely want to run at least 2 weeks to get a decent seasonality mix of visitors in a week and consistency in the sales pattern.

Timeline / Key Dates

Jul 31, 2025 - kickoff (1) prepaywall / (2) postpaywall design
Aug 5, 2025 - george/abhi review (1) prepaywall/checkout designs
Aug 7, 2025 - lock (1) prepaywall/checkout design

Aug 11, 2025 - agustina fe start scoping/feedback of (2) postpaywall design
Aug 16, 2025 - Survey results (inform design)
Aug 18, 2025 - Certs Announcement
Aug 18, 2025 - Tech spec (1 week)
Aug 19, 2025 - lock pricing / packaging
Aug 20, 2025 - lock (2) post paywall design

Sep 2, 2025 - pre-enroll NSF, Ads launch, NSF tier test
Oct 2, 2025 - NSF launch with premium tier features



Open Questions:

-

Experiment Structure

	Control	**Variant 1** Figma
Description	No Price on Cert Landing Page, just in checkout	Add Plans Page Primer Page Plans Page has Premium Tier All CTA's go to Plans Page Add Plans Section to Landing Page $299 base, $X99 premium (informed by conjoint study 8/16) Slack Community ~~All CTAs on page (except the ones in this section) jump users down to this tiers section.~~ Upsell page post purchase

Design (prepaywall) Figma explorations here		
Traffic %	50%	50%

Reqs	**Product Requirements for PrePaywall (9/4):**
	● Po SKU event implementation - all you need is a separate product that's associated with a cert.
	  ○ Add new meta data to product, concept of standard v. premium. Borrow JP coupon logic to product configuration. Products have polymorphic relationship to assets (certificate).
	  ○ Do we sell the same certificate or create a separate certificate? Operate as a constraint that its the same certificate, unless this is unwieldy to provision new set of features.
	● Po transactional emails specific to new SKU
	● Po MarTech Changes - PALM / MarTech
	● Po enable discounts to be applicable to premium tier with same % as standard tier.
	● Po enable purchase of premium tier such that we can entitle those purchasers with the premium features.
	  ○ Separate API for products, currently only send a single product in checkout. All products come back, only conditionally show based on GB flag?
	● Po tier section on landing page for variants
	● Po plans page
	● Po needs to work during and not during promo period
	● Po refund logic for premium (base already assumed)
	  ○ Less worried here if we have 1 cert but mult products. Purchase flows all work identically.
	  ○ Po Update to the refund policy assuming we have tiers
	● Po staging & product environments
	● Po Forced links for variants
	● Po Enable creation of new users and provisioning of any cert in the admin
	● Po Unique purchase slugs for tier type
	● Po* post checkout upsell screen for base tier buyers. 2 main options:
	  ○ 1. Refund base SKU, resell premium SKU. no APIs that do any of this, would need to build (refund integration, QF reconciliation)
	  ○ 2. New asset type called cert upgrade which has delta between premium and base SKUs.
	  ○ *data / LCM implications
	
	~~**Product Requirements for PostPaywall (10/2):**~~
	~~● Po Roleplay & Coaching tab inside cert experience~~
	~~● Po Visual polish - colors and fonts aligned to certs brand, no visibility of on-call branding~~
	~~● Po Score / feedback for roleplays~~
	~~● Po coach debriefs (contractual check pending)~~
	~~● Po coaching (contractual check pending)~~
	~~● Po No cooking, no On-Call mentions, no personal mentors~~
	~~● Po deep link ability to specific role plays~~
	~~● Po Role play - categories available: communication, leadership, relationships, interview prep~~	

	~~• P0 Staging and production environments~~ ~~• P0 Events - ability to clearly differentiate between cert role play / coach events v. on call role play / coach events~~ ~~• P0 Same latency reqs as OnCall~~ ~~• P1 Layouts / spacing / button shapes / etc aligned to certs visual language~~ ~~• P1 Upsell from baseline experience in product experience (show locked tabs for users who purchased baseline with an upsell page / screen)~~ ~~• P1 Inherit any improvements from OnCall~~ ~~• P1 Role plays dedicated for each certificate topic~~ ~~• P1 Role plays integrated into learning experience (linked to from curriculum, informed by learning designer)~~ ~~• P1 Custom Role play~~

Tier Differentiation:

Feature	**Base tier** $299	**Premium Tier / Career Advancement Tier** $X99, pricing to be determined ~@8/18 *Base + Interview Training + Role Play*
Number of Courses Included	1 course	2
Length of access to course content	1 year	2 years
Real-time feedback on projects from a trained AI model	☑️	☑️
Personalized coaching and feedback from the AI of the world's best	❌	☑️
Practice high-stakes conversations tailored to your real-life situation	❌	☑️

Results

Preliminary Read-out
Date: 9/22
Results PDF: Growth_Experiment_Dashboard_v1_2025-09-22T1325.pdf
Dashboard

TL;DR

- No Tier is likely the winner in the early results read at 20% sample size.
- Suggest waiting till sample reaches 25% (33.7k) to make the final call. ⇒ Decision Sep 23, 2025 to collapse to 100% to No Tier

What was tested

- No tier vs. 2-tier

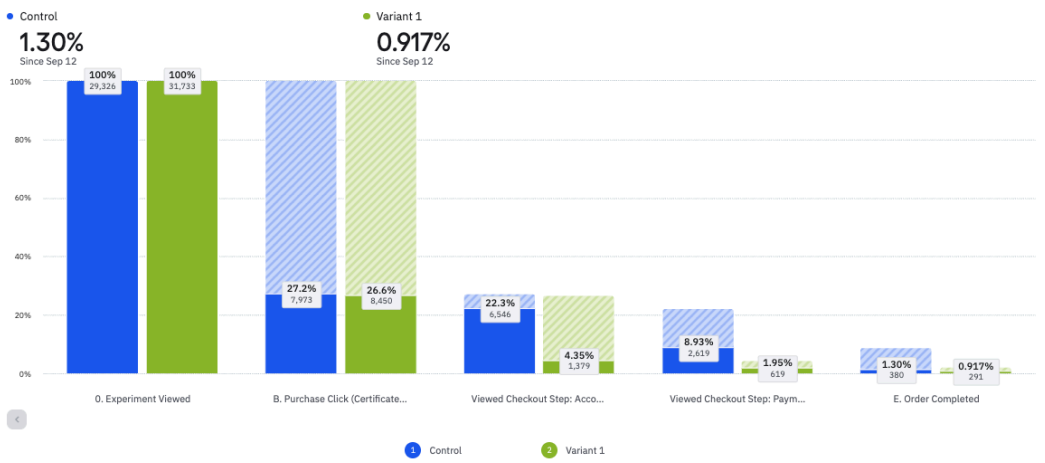
Results takeaways

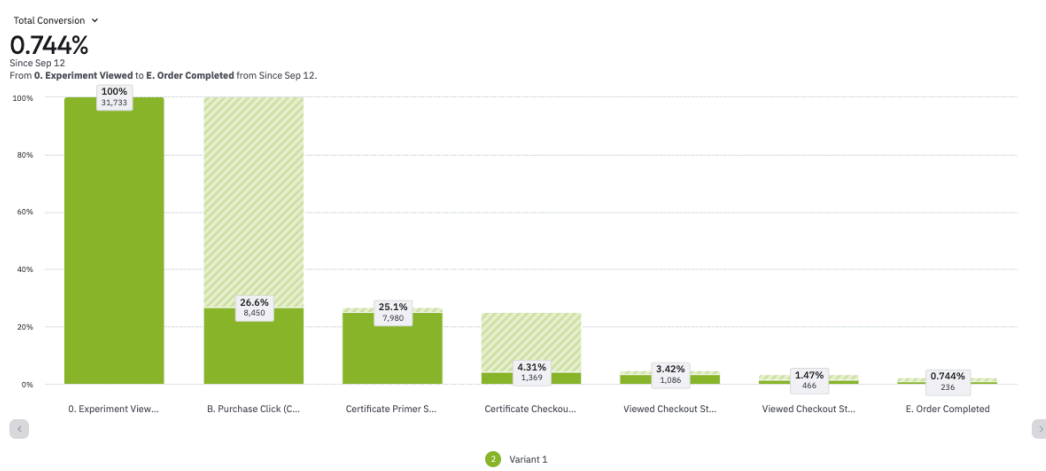
- This early check-in at 20% of total targeted sample size shows No Tier has 30% higher Sales/Visitor vs. 2-tier with >99% significance.

Summary Results

	Experiment Name	Variation Name	Visitors	Purchasers	CVR	Refunded Purchases	Purchases Refund Rate	Sales per Visitor	2yr Ltv per Visitor	5yr Ltv per Visitor	AOV	CVR % Change	CVR Significance	RR % Change	RR_Significa	Sales Per Visitor %Change	Sales Per Visitor Significance	2yr LTV/Visitor %Change	2yrLTV Per Visitor Significance	5yr LTV/Visitor %Change	5yrLTV Per Visitor Significance	AOV % Chang
1	mccerts-...	Double ti...	28,036	259	0.92%	13	4.96%	$2.74	$0.00	$0.00	$292.77	0.00%	50.00%	0.00%	50.00%	0.00%	50.00%	∅	∅	∅	∅	0.00%
2	mccerts-...	No tiers	28,007	407	1.45%	16	3.85%	$3.55	$0.00	$0.00	$238.78	57.31%	100.00%	-22.49%	75.18%	29.63%	99.94%	∅	∅	∅	∅	-18.44

- **Purchase Funnel:**
  - We see an 84% dropoff from Purchase Click to Account Creation in the 2-Tiers (source). Most of the dropoff happens at the Plans Page for 2-Tiers (source). It's likely that the dropoff is occurring earlier in the funnel due to viewing the price.





- Comparing **No Tier** and **2-Tiers** dropoff points
  - Main dropoff for **No Tier** happens at the Payment Entry step (post account creation) where users are finally able to see the price

        - No Tiers (source) (EV > Viewed Price > OC)
            - 84% dropoff from viewing price
            - 
    - Main dropoff for **2-Tiers** happens at the Plans step (prior to account creation) where users see the price of both tiers upfront
        - 2-Tiers (source) (EV > Viewed Price > OC)
            - 95% dropoff from viewing price
            - 
    - Notes/Hypothesis:
        - Could having users complete Account Creation / email submission influence purchase intent prior to viewing price?

Recommendations

- Keep the test live until we reach 25% sample (33.7K per variant), at which point we will make the final decision based on the early stopping rules listed below. (Given recent ~1k traffic/day, we would likely reach the targeted 25% sample size within 6 days.)
  This is suggested to:
    - Maintain test integrity to adhere to the previously agreed on early stopping rules of:
        - At 25% of total sample size: p-value <0.01
        - At 50% of total sample size: p-value <0.02
        - At 75% of total sample size: p-value <0.05
    - Avoid arbitrary early stopping check points for future tests to avoid p-hacking.
    - Moonshot paid marketing launched on 9/18, 3 days ago from this first check point. Additional time allows for the results to absorb the paid marketing impacts.

- We acknowledge that No Tier is most likely to remain the winner at 25% sample size. Therefore we feel comfortable recommending the team to start planning for No Tier as the baseline for future.
- Discuss: recommendation is to not iterate on tiers in Q4, and punt tiers iterations to Q1
- Decision 9/23:
    - Collapse to 100%
    - Email for purchasers, stack rank of features
    - Re-enable after sprig survey
    - Argument to do more tiers testing in q4, but discuss against other prioritities

Notes for Future Analyses

- Survey for tier purchasers
- We noticed a spike in the 2-Tier CVR and Sales/Visitor on 9/19 while other days we see them visibly lower vs. No Tier.
    - Hypotheses: emails to existing MC members on 9/19, triggering an influx of existing MC members to Certs. There is likely a different behavior from existing vs. new members.
        - We know that Existing users are more likely to purchase premium tier, (28% vs. 10% orders of new users)
        - More investigation, or maybe tests is needed to verify this hypothesis

What's Included in the Certificate:

- 30-day money-back satisfaction guarantee.
- Access to all video and reading materials, case studies, assignments, and quizzes.
- Earn a MasterClass certificate upon completion to enhance your resume and LinkedIn profile.

Notes

Aug 20, 2025 - kaison/mandar

- Give it a thought interview role play practice might appeal to folks
    - Have launched custom roleplays on on call, 30% are on interviewing
    - Proposed interview prep due to timing
- The slack community of it all seems based on conjoint, we're excited about it. For everything else, the incremental ongoing cost is not that high. For slack community, incremental ongoing cost / effort will be high.
    - What will be a clean way to get the read on how much value to people attach to a slack community?
- He wants to test slack community, thats fine. Would also want to test tier without that feature
    - What if we add community as a line item for month of sep, remove it starting October, for one month, hire a community manager. Only a 3 month long networking, only frame it as 3 months of community access. Hire a community manager, put all these folks through slack, here we go.
    -

Aug 5, 2025

- Run control v. putting in price in week 1
    - If we have high MDE
    - Not enough change to justify a high MDE

Aug 5, 2025

- Credit / gifts
    - Could build it in admin.
    - User emails support to gift certificate
    - Steph / her managers, email them with your choice:
        - Maybe there's a form
    - Need a way in mc admin to enroll users. If user does not exist in system, we would create that user.
- Addons;
    - Any product level experience tied to talking to an instructor?
    - Gladly?
    - Showing it in the product
- On Call provisioning
    - How is user created
    - How does user get access?
    - Should they have access as soon as they buy premium tier?

Jul 31, 2025

- Prepaywall
    - Not as worried about FE
    - FE would come in 2 weeks
    - Designs could come pretty quickly
    - BE Matt Snow out next week, key technical lead not here, could have Abhi start working on this with tech spec
    - 1 week of testing, gives us 8/25
        - 3 weeks starting next week
    - Matts would not be helping with alpha or seals stuff
        - Would reduce confidence we have in ai feedback for NSF and Moonshots
    - Abhi can free up next week
    - Agustina can free up in 2 weeks, which gives is 1 week to do the FE
    - Another planning Aug 1, 2025 with Matt
    - Might impact capstone project
    - Can cut dispute flow, general video, drops
- Postpaywall
    - Nothing changes post paywall until 10/2
    - Can we deep link?
    - Upsell
    - Post paywall upsell screen

Jul 31, 2025

- Talk to caitlin re. Nsf relationship
- Took a year for Cuban deal
- Ali to talk to Caitlin and talent team for these relationships. Wouldn't need to amend the paperwork.
- BE - does impact margins, some portion of that will have to go instructors.
    - 15/20%

8/1/25 - mandar / kaison

- We charge, if premium does not do well, we can return money.
    - How do we make them whole? Ask legal.
        - Downgrade them to standard.
    - Lots of people actually dont pick it, should not be a big impact.
    - If its a winner, we implement, but it might be delayed until end October

Agentic AI

Go beyond single chatbots to engineer sophisticated, coordinated teams of AI agents. This Nanodegree guides you from advanced prompting techniques like Chain-of-Thought and ReAct to designing agentic workflows with patterns like Routing and Parallelization. You'll master building and orchestrating agents in Python that can reason, plan, and use tools to interact with databases and external APIs. Build a powerful portfolio by tackling hands-on projects, including a multi-agent travel planner, an AI-powered project manager, and a fully automated sales system, to solve real-world problems.

Nanodegree Program | Intermediate | 51 hours | Updated: Jul 25, 2025

Skills you'll learn

54 skills

- Multi-Agent System Design With Python And OpenAI
- Multi-Agent State Management Concepts
- Multi-Agent Orchestration Implementation With With Python, Smolagents, And OpenAI
